Introduction to TDL Testing

Abstract

The aim of this 2-day course is to introduce the student to TDL Testing. Testing can consume around 25% of a TDL procurement budget (time and cost), is a necessarily complex activity and critical to the overall success of a programme. It is highly beneficial that everyone involved in the development, procurement and management of TDLs gains an early and clear understanding of what TDL Testing involves and the impact it will have on them.

Intended Audience

MOD Procurement Staff, Industry Developers, Technical Managers, Engineers, Project Managers & Operational test staff.

Subjects Covered

- Basic Principles of Testing.
- Test Definitions and Methods.
- Engineering/Product life cycles.
- iSMART process & I/O Testing methodology.
- Standards, Requirements and System Documentation.
- Verification and Validation.
- System Testing.
- Test Analysis and Tools.
- Test Evidence and Reporting.
- Problem Reporting and Management of Observations.
- Managing Software & Hardware Configuration Control.
